Introduction

Executive Summary

This 2021-2022 Watermaster Report, developed by the Administrative Body and adopted by the Water Rights Panel, provides information on groundwater extractions, storage accounts, use of imported water and recycled water, replenishment operations, and the budget and finances of the Central Basin (Basin) Watermaster during the 2021-2022 administrative year (AY). This report complies with the provisions set forth in the Central Basin Third Amended Judgment (Judgment).

During the 2021-2022 AY, the Basin experienced a decrease in groundwater extractions (assessed pumping and storage withdrawals) when compared to the previous AY. Furthermore, no imported water was purchased by the Water Replenishment District of Southern California (WRD) for spreading in the Montebello Forebay.

This report is organized by three sections, including Water Use, Water Supply, and Watermaster Costs and Budget. In addition, the report provides various tables and figures describing the narrated information.

Background

The Central Basin Watermaster Service Area overlies approximately 227 square miles of the Basin in southeastern Los Angeles County. Figure 1 shows the location and boundaries of the Central Basin Watermaster Service Area (adjudicated boundary). The Watermaster Service Area is bounded by the Newport-Inglewood Uplift on the southwest, the Los Angeles-Orange County line on the southeast, and an irregular line that approximately follows Stocker Street, Martin Luther King Boulevard, Alameda Street, Olympic Boulevard, the boundary between the City of Los Angeles and unincorporated East Los Angeles, and the foot of the Merced Hills and Puente Hills on the north. Twenty-three incorporated cities and several unincorporated communities lie within the Watermaster Service Area. Groundwater from the Basin provides a substantial portion of the water supply needed by the residents, businesses, and industries in the area overlying the Basin.

More than 60 years ago, groundwater overdraft and declining water levels in the Basin threatened the area's groundwater supply and caused the intrusion of seawater into the aquifers in the southern part of the Basin. However, timely legal action and adjudication of the water rights halted the overdraft and prevented further damage to the Basin. Since that time, groundwater extraction from the Basin is limited to the amounts set by a Superior Court Judgment and monitored by a Court-appointed Watermaster.

The first Judgment was finalized and signed in 1965 and it appointed the Department of Water Resources (DWR) as the Watermaster. Since its inception, the Judgment has been amended three times. The Judgment was first amended in 1980 to provide transition from a water year to an

administrative year (October 1 to September 30) to a fiscal year (July 1 to June 30). The Judgment was amended for the second time in 1985 to modify the annual budget (\$20 minimum assessment) and exchange pool provisions. In addition, the second amendment modified carryover and overproduction provisions, defined carryover, and provided for exemptions for extractors of contaminated groundwater. The Third Amended Judgment was finalized on December 23, 2013. For the first time, the Court allowed Parties to have direct input into how the Judgment is administered and enforced. The Judgment confirmed the retirement of DWR as the Watermaster and created three separate bodies that assist the Court in the administration and enforcement of the provisions of the Judgment.

The first body is the Administrative Body, which administers the Watermaster accounting and reporting functions. The WRD was appointed by the Court to fulfill this role.

The second body is the Water Rights Panel, which enforces issues related to the pumping rights within the adjudication. The Water Rights Panel is made up of seven water rights holders who are elected by rights holders in the Central Basin. Members of the Water Rights Panel during the 2021-2022 AY included the Bellflower-Somerset Mutual Water Company, City of Downey, Golden State Water Company, City of Lakewood, City of Long Beach, City of Paramount, and City of Signal Hill.

The third body is the Storage Panel, which is comprised of the Water Rights Panel and the WRD Board of Directors; together they review and approve certain groundwater storage efforts.

Water Use

A. Allowed Pumping Allocation Extractions by Parties

The Judgment limits the amount of groundwater each Party to the Judgment may extract annually from the Basin. This amount is known as the Party's Allowed Pumping Allocation, or "APA". The APA for each Party is listed in Table 1a. Parties are required to report groundwater extractions to the Administrative Body monthly (or quarterly for smaller producers). In addition, Table 1b lists the total drought carryover rights for the parties that hold them. Appendix A lists, by Party, the volume of groundwater extracted monthly from each active well in the Basin. Figure 1 describes the variation of groundwater production by three distinct production classifications: less than 500 acre-feet per year (afy), 500 to 2,000 afy, and more than 2,000 afy, during the 2021-2022 AY. In addition, Figure 2 illustrates the monthly water production (excluding non-consumptive use) for the 2021-2022 AY, which totaled 173,669.74 af (includes 9,442.91 af of storage extractions), which is a 4% production decrease from the previous AY.

To provide flexibility regarding groundwater extractions, the Judgment contains provisions, such as the "One-Year Carryover", which allows each Party to carryover into the succeeding administrative year a portion of its unused APA. Specifically, Parties are allowed to carryover unused rights up to the greater of:

- 60% of their APA plus (+) or minus (-) any leases with flex or 20 af, whichever is more, less the amount of water in a Party's storage account; or
- 20% of a Party's APA

This type of provision is necessary to meet unforeseen water demand. In addition, any unused Exchange Pool water, discussed in Section (I), is carried over into the following AY.

B. Storage Transactions

The Judgment allows Parties with water rights to store water in the Basin for later extraction. Pursuant to Section III.A.(2) of the Judgment, Parties can convert one-year carryover to storage upon payment of the Replenishment Assessment to WRD.

Table 2 describes storage accounting, including total carryover from the 2020-2021 AY, storage activity for the 2021-2022 AY (transfers, water put into storage, and water extracted from storage) and the total storage balance into the ensuing AY. Table 3 lists the quantity of water that was put into storage by each Party during the 2021-2022 AY. The total amount of water that was put into storage was 18,042.20 af, which is an 82% increase from the previous AY. In addition, a total of 9,442.91 af was extracted from storage by three Parties, which are listed in Table 4.

The Judgment also allows for the transfer of stored water between Parties. However, there were no transfers of stored water during the 2021-2022 AY (Table 5).

Table 6 provides a historical storage summary from 2013-2014 to 2021-2022 AY of water put into storage, water extracted from storage, storage balance, and the available adjudicated storage capacity.

C. Regional Disadvantaged Communities Incentive Program

Section II.H. of the Judgment contains provisions for the development of a Regional Disadvantaged Communities Incentive Program (RDCIP) that allocates 23,000 af of storage space for the use or benefit of Disadvantaged Communities (DAC) within the Central Basin. A DAC is defined as any area that is served by a water purveyor and consisting of one or more contiguous census tracts, which based upon the most recent U.S. Census data, demonstrates a median household income which is less than eighty percent (80%) of the median household income for all Census Tracts within the State of California. This program was developed by the Water Rights Panel during the 2014-2015 AY and approved by the Court in June 2015.

There were no requests for participation in the RDCIP in the 2021-2022 AY.

D. Total Extraction Right and Overextraction

The total extraction right is the maximum amount of groundwater that can be extracted in a single AY. In the Central Basin, Parties with carryover and/or storage rights are allowed to extract up to 140% of the sum of their APA plus or minus (+/-) leased water. For example, if a Party has an APA of 1,000 af, 400 af of stored water rights, and leases an additional 200 af, their total extraction right would be calculated as follows: $(1,000 + 200) \times 1.4 = 1,680$ af. Conversely, if the Party leased out 200 af, their total extraction right would be $(1,000 - 200) \times 1.4 = 1,120$ af. Parties with no carryover and/or storage rights can overextract 20% of their APA plus or minus (+/-) leased water or 20 af, whichever is greater. Under certain circumstances, a Party may extract in a greater amount if they receive prior approval from Watermaster. Any Party that exceeds their total extraction right without prior approval from Watermaster is in violation of the Judgment.

Any overextraction, which is the difference between total rights and total extractions, is deducted from that Party's subsequent administrative year's APA. The overextraction must be reconciled in the following administrative year unless Watermaster concludes that making up the overextraction would create an unreasonable hardship for the Party. In such cases, Watermaster may prorate the reduction in the Party's APA over a period of up to five years. Watermaster will notify a Party when they are in violation of the Judgment and/or overextracts.

During the 2021-2022 AY, Virginia Country Club had an overextraction of 5.41 af. However, they did not pump beyond their total extraction right, thus are not in violation of the Judgment. In addition, Caltrans has a significant overextraction carryover from previous years, which is a result of dewatering under the 105 Freeway (Table 7).

E. Extractions by Non-Parties

In the 2021-2022 AY there were no extractions by Non-Parties reported (Table 8).

F. Extractions of Contaminated Groundwater

A Party that is a water rights holder may petition WRD for a Non-Consumptive Water Use Permit (NCWUP) as part of a project to remediate or ameliorate groundwater contamination. If the petition is granted, the Party may extract the groundwater without counting against its production rights, so long as conditions of the Judgment are met. A non-Party may extract contaminated groundwater for cleanup purposes by partnering with a Party who obtains the NCWUP and then assigns it to the non-Party.

Table 9 lists current NCWUPs issued by WRD and the amounts of groundwater extracted under those permits. In the 2021-2022 AY there were 45.06 af of NCWUP extractions via four permits. Appendix A reports these extractions monthly by well.

G. Allowed Pumping Allocation Transfers

Each year, APAs are transferred between Parties through leases (temporary transfers) and change of ownership (permanent transfers) transactions. Table 10 shows transfers of APAs through leases, specifically the parties involved, transaction type, amount, and recordation date. During the 2021-2022 AY there were 44 leases that totaled 21,378.07 af (33 leases with flex and 11 leases without flex). Leases with flex transfers both the pumping right and associated carryover rights to the lessee for the term stated within the lease agreement.

In transferring water rights, Parties must specify (1) the type of right (i.e., APA, one-year carryover, or drought carryover), (2) the amount of right to the nearest 0.01 af, and (3) the period of the lease, if applicable. Moreover, all leases must be made on an administrative year basis and must be executed by the Parties and received by Watermaster no later than one month and 15 days following the end of the AY in which the lease is effective.

Table 11 shows permanent transfers of APA and carryover. There were three permanent transfers of APAs that totaled 32.04 af.

The transfer of water rights must be documented accordingly. For example, when land is sold on which a water right has been developed, the Watermaster must receive a copy of the transfer document if the water right is also transferred. The water right does not automatically pass to the new landowner unless the transfer document specifies that the water right was transferred with the land. For the proper accounting of the water right, the transfer document must specify (1) the type of right (i.e., APA, one-year carryover, drought carryover, or stored water) and (2) the exact amount of water right(s) transferred. Watermaster provides a template for a Deed of Water Rights - Permanent Transfer transaction on its website to ensure the information provided is sufficient.

For the 2021-2022 AY, there were 150 Parties to the Judgment (individuals or entities that have a water right, privilege or obligation to the Judgment), including a new Party named Omega OU2, LLC; and 123 Water Rights Holders. There was a decrease in water rights holders due to a permanent transfer of water rights (Table 11). Appendix B shows the succession of each party's APA, and Appendix C lists current Parties to the Judgment and Water Rights Holders, including non-parties that own water rights.

H. Exchange Pool

The Judgment authorizes an Exchange Pool to provide additional water rights to Parties without sufficient water. If a Party's estimated water requirement for the following AY exceeds its total available water supply, that Party may purchase additional water from the Exchange Pool. Any Party wishing to purchase water from the Exchange Pool must file a request with the Watermaster before April 1. If no requests are received by April 1, the Exchange Pool will not operate in the following AY, and Watermaster will not process Exchange Pool forms. There were no requests for Exchange Pool water during the 2021-2022 AY (Table 12).

I. Status of Extraction Wells

There were 273 wells with reported extraction in 2021-2022 AY. There was a significant decrease in active wells from the previous AY, which correlates with the decrease in production this AY. The location of the wells and their relative amount pumped are shown in Figure 1. There were six new extraction wells reported completed (Table 13) and two extraction wells reported destroyed (Table 14) in the 2021-2022 AY.

J. Meter Testing Program

Accurate measurement of groundwater extractions is essential for the successful management of groundwater in the Basin. Therefore, Watermaster requires an operative water meter to be installed at each extraction well. It is the responsibility of each Party to ensure that its meter and test facilities are installed properly and are maintained in good working condition. It is the goal of Watermaster to test the water meter at each active extraction well at least once every two years or when a Party requests a meter calibration. Watermaster tests meters by volumetric or pitot tube comparisons. Watermaster notifies a Party that it must repair or replace its meter when the meter registers beyond five percent accuracy. Watermaster calculates the monthly water production for each well using the meter readings and Unit of Measure Code reported for the well that month. If the registration accuracy of the meter deviates by as much as five percent, the calculated well production could be subject to revision.

The meter testing program is managed by the Water Rights Panel. During the 2021-2022 AY, the DWR visited 42 Parties and performed 184 tests. Tests showed that zero meters were inconclusive, and eight meters did not pass, which means the meters were either more than five percent fast or slow. The Watermaster Administrative Body notified those pumpers they must schedule repair and retesting of failed meters in a timely manner.

Water Supply

A. Precipitation

Precipitation over the Basin has relatively minimal direct influence on the replenishment of the groundwater in the Basin. This is a result of the low soil permeability that characterizes the primary water-producing aquifers throughout much of the Basin and largely impermeable surfaces (i.e., pavement and buildings) covering most of the forebay areas. However, during the years of higher rainfall, increased runoff in the upstream areas of the Basin can result in increased replenishment to the Basin and decreased groundwater demand by the water users, which in turn can result in lower rates of groundwater extraction from the Basin.

During the 2021-2022 AY, the following amounts of precipitation were measured at five precipitation stations located throughout the Central Basin region:

- 8.90 inches at Los Angeles-RD241 (formerly 96th and Central)
- 8.64 inches at Montana Ranch
- 12.40 inches at University of Southern California
- 7.75 inches at La Mirada Station
- 9.15 inches at Imperial Yard

Figure 3 shows the locations of these precipitation stations, and Figure 4 shows the monthly precipitation average measured at the stations. Based on the total rainfall measured at the stations, the mean precipitation over the Central Basin was 9.37 inches, which is 84% of the long-term mean of 11.11 inches. The mean precipitation for 2021-2022 AY increased by 4.29 inches compared to the previous AY.

B. Groundwater Recharge

Natural replenishment of the groundwater in the Basin occurs largely from surface flow and underflow through Whittier Narrows from the San Gabriel Valley. As mentioned above, minimal rainfall over the Basin infiltrates into deeper aquifers of the Basin.

Intentional replenishment of groundwater in the Basin is accomplished by capturing and spreading river water at the Rio Hondo and the San Gabriel River Coastal Spreading Grounds in the Montebello Forebay (Figure 3). The sources of this replenishment water include local storm runoff, local dry weather urban runoff, imported water purchased from the Metropolitan Water District of Southern California (MWD), and recycled water purchased from Los Angeles County Sanitation Districts. There was a 583 af decrease in “local runoff” from the previous AY. Table 15 shows the sources and quantities of water spread to replenish the groundwater for the 2020-2021 AY and 2021-2022 AY. Specifically, WRD purchased zero af of imported water for spreading, which is the third consecutive year that no imported water is purchased. In addition, WRD

purchased 54,614 af of recycled water for spreading, which is 10,034 af or a 23% increase from the previous AY.

C. In-Lieu Replenishment

During the 1965-1966 water year, WRD, in cooperation with the MWD, began an in-lieu replenishment program, where discounted imported water was offered seasonally due to availability. WRD has contracted with producers having access to supplemental imported water that could be used in lieu of extracting groundwater from the Basin to reduce overall pumping impacts. Due to water shortages and other reasons, MWD discontinued their discounted seasonal imported water in 2011 and as a result, WRD suspended its in-lieu program except under special circumstances. There was no in-lieu recharge during the 2021-2022 AY (Table 16).

D. Imported Water

Water is imported from Northern California via the State Water Project and the Colorado River and is made available to water users by MWD through its member agencies: Central Basin Municipal Water District (CBMWD) and the Cities of Compton, Long Beach, and Los Angeles, City of – Dept. of Water & Power (LADWP). LADWP also imports water from the Owens River-Mono Basin. Furthermore, the California Domestic Water Company, the San Gabriel Valley Water Company, Suburban Water Systems, and the City of Whittier import groundwater from the San Gabriel Valley groundwater basin, which lies to the northeast and upstream of the Basin. In the 2021-2022 AY, a total of 113,855 af of water was imported, for potable use, to the area overlying the Central Basin. Table 17 lists imported water use by source of water, Party, and quantity, not including WRD replenishment water.

E. Recycled Water

Table 18 shows that 16,942 af of recycled water was used in the area overlying the Basin during the 2021-2022 AY, not including WRD replenishment water. This was an increase of 169 af from the previous AY.

F. Total Water Use

Figure 5 shows 304,467 af of total water use in the Basin during the 2021-2022 AY, including extracted groundwater, imported water, and recycled water for direct use.

G. Exported Water

In the 2021-2022 AY, the California-American Water Company exported 2,040 acre-feet of groundwater from the Basin to its service area that overlies a portion of the West Coast Basin.

H. Increased Extraction in the Basin for Certain Purveyors Serving Overlying Communities

Per Section IV.K of the Judgment, “certain purveyors” are Parties to both the Central Basin Third Amended Judgment and the West Coast Basin Judgment and serve communities overlying both the Central and West Coast Basins. These purveyors include the City of Los Angeles, Golden State

Water Company, and California Water Service Company and are allowed to increase their extraction in the Central Basin beyond their APA. Furthermore, the increased extraction, which is limited to 5,000 af per AY, is counted against their adjudicated right (AR) in the West Coast Basin.

In the 2021-2022 AY Golden State Water Company increased their extraction in the Central Basin by 1,190 af, which is reflected in Table 1.

I. Alamitos Gap Barrier Project

The Los Angeles County Department of Public Works operates a seawater intrusion barrier to protect water supply wells located inland of the Alamitos Gap near the San Gabriel River (i.e. Alamitos Gap Seawater Barrier Project). The barrier lies in the Central Basin and Orange County, which is shown on Figure 3.

The quantity of imported and recycled water injected into the Los Angeles County side of the barrier in 2020-2021 and 2021-2022 AY are summarized in Table 19. There was a 20% increase in imported water use and a 12% increase in recycled water use for injection from the previous AY.

J. Groundwater Levels

Figure 3 shows the location of the selected wells that are used to monitor groundwater level elevations in the Basin. Figure 6 shows the water level elevations in key wells located in the Montebello Forebay, Figure 7 shows the water level elevations in wells perforated in Principal Aquifers of the Basin, and Figure 8 shows the water level elevations in one well located in the Los Angeles Forebay. WRD's annual Engineering Survey and Report and Regional Groundwater Monitoring Report provide more information on groundwater levels. These reports are available on WRD's website.

Watermaster Costs and Budget

To fund Watermaster activities, both the Administrative Body and the Water Rights Panel have annual assessments that are levied on water rights holders under the terms of the Judgment.

The Administrative Body assessment applies to the rights holders that have extracted from the Central Basin within the current or past two administrative years (active groundwater producers). The assessment is a flat fee of twenty dollars (\$20) for each active rights holder. In addition, a proportion of the remaining Administrative Body budget is based on the APA of the active rights holder.

The Water Rights Panel assessment is charged to all water rights holders, not just active rights holders, and it is based on their APA.

For 2021-2022 AY, the Watermaster budget for the Administrative Body was \$198,853. The total Administrative Body budget, shown in Table 20, fluctuates due to the change in active parties each AY (within a range of approximately \$3). The Watermaster budget for the Water Rights Panel was \$108,683, which is a decrease of \$43,473 from the previous AY. The decrease is attributed from a decrease in the Water Rights Panel annual assessment from \$0.70 to \$0.50 per af. The overall Watermaster budget was \$307,536. Table 20 lists the budget summary for the 2021-2022 AY.

¹ APA – Allowed Pumping Allocation

² Net Carryover = Drought Carryover + One-year Carryover from the previous year (AY 2020-21) less the amount of carryover conversion for the current year (AY 2021-22).

See Table 1b for Drought Carryover totals.

See Table 3 for carryover conversion (water put into storage) per party for AY 2021-22.

³ See Table 10 for information concerning leases. Lease with flex include carryover provisions.

⁴ Storage includes storage carryover conversions for AY 2021-22. See Table 2 for a summary of all Storage Accounting per party for AY 2021-22.

⁵ Increased Extraction: Section IV(K) of the Central Basin Judgment permits increased extraction rights through use of up to 5,000 af of certain parties' West Basin Rights in the Central Basin

The parties include City of Los Angeles, Golden State Water Company, and California Water Service Company.

⁶ Total Rights = Allowed Pumping Allocation + Net Carryover + Leases + Storage + Increased Extractions, but does not necessarily equal Annual Extraction Limit (see page 5, section D).

⁷ Assessed Pumping does not include storage withdrawals.

⁸ Storage Withdrawals include all withdrawals from a Party's Individual Storage Accounts and Community Storage Accounts, which totaled 9,442.91 af for AY 2021-22. See Table 4 for storage withdrawal amounts per party.

⁹ Total Pumping = Assessed Pumping + Storage Withdrawals

¹⁰ Balance = Total Rights - Total Pumping

¹¹ Completed carryover conversion into storage. 2020-2021 net carryover:

Cerritos, City of: 500 AF; Downey, City of: 2,000 AF; Lakewood, City of: 4,670.73 AF

Long Beach, City of: 6,538.40 AF; San Gabriel Valley Water Company: 333.07 AF; South Gate, City of: 4,000 AF

¹² Negative One-Year Carryover will be deducted from the subsequent year's APA.
