Subject: RE: Proposed Santa Paula-Fillmore Basin boundary modification

Tim,

I can meet with you Friday at 10:30 at United. Kim is not available, but the clock is ticking so I'd rather get this moving than wait until next week. I've seen, and support, the Fillmore basin proposal. A support letter from the Board can be done, just need to work out if it is a staff recommendation, or if it comes from Supervisor Long's office.

The fringe areas where we could help from United are the areas north of Santa Paula basin (the thread of this email chain). In total there are 2 domestic, 3 irrigation, and 3 municipal wells (Thomas Aquinas) in those areas. Opening the adjudication is a non-starter, and managing them as a GSA in coordination with the adjudication will be burdensome for so few wells.

Arne

Subject: Proposed Santa Paula-Fillmore Basin boundary modification

Hi Arne,

I would like to set up a meeting with you and whoever else you think is appropriate from the County to discuss the proposed Fillmore and Piru Basins boundary modification (FPBGSA BOD resolution and map attached). This proposed modification would incorporate one of the GSA "white" areas that County filed to be the GSA for into the Fillmore Basin. John Lindquist is on vacation but Dan Detmer is available on our end to meet towards the end of the week. Ultimately, the FPBGSA is seeking a letter of support from the Ventura County Board of Supervisors to be submitted with the proposed basin boundary modification packet. I am hoping you can help me with the path forward in procuring this letter. This meeting can also be an opportunity for you to bring Dan and I up to speed on where you are at with the other white/fringe areas that the County filed to be the GSA for to bring those basins into compliance with SGMA.

Dan and I are available to meet on Friday (April 6th) any time after 10:30am or early next week at your convenience. We can meet here at United's headquarters in Santa Paula or we can come to you if that works better for you. Thanks,

Tim Moore, PG, CHG
