

Basin 8-1 Alternative

Coverage of Basin 8-1

The Sustainable Groundwater Management Act (SGMA) requires that an entire basin be covered when submitting an Alternative to a Groundwater Sustainability Plan (GSP). In order to achieve complete coverage of Basin 8-1 as well as address unique hydrogeological conditions, Basin 8-1 was divided up into four management areas as shown in the figure below.

The La Habra-Brea Management area covers 4 percent of Basin 8-1. The report covering this management area was prepared by the City of La Habra, which is the exclusive Groundwater Sustainability Agency for this area. The City of La Habra has executed an MOU with the City of Brea to ensure complete coverage of this area.

The Orange County Water District (OCWD) Management Area covers 89 percent of Basin 8-1. This area is under the jurisdiction of OCWD.

The South East Management Area covers 4 percent of Basin 8-1. The report covering this management area was prepared by the Irvine Ranch Water District in collaboration with the El Toro Water District and

City of Orange. Combined, these three agencies have jurisdiction over the entirety of the South East Management Area.

The Santa Ana Canyon Management area covers 3 percent of Basin 8-1. OCWD covers much of this area, but other agencies with jurisdiction include the Cities of Anaheim, Chino Hills, Corona, Yorba Linda, the Counties of Orange and Riverside and the Yorba Linda Water District. All of these agencies collaborated with OCWD in developing the report covering the Santa Ana Canyon Management Area.

As shown above, the entirety of Basin 8-1 is covered by the Basin 8-1 Alternative. More details regarding the various agency boundaries involved are included in the Basin 8-1 Alternative.
