

LIST OF ALL BENEFICIAL USES AND USERS OF GROUNDWATER

Pursuant to Water Code Section 10723.8(a)(4), the Oakdale Irrigation District Eastern San Joaquin Sub-basin Groundwater Sustainability Agency (OID ESJS GSA) will consider the interests of all beneficial uses and users of groundwater during the development and implementation of a Groundwater Sustainability Plan (GSP).

Holders of overlying groundwater rights:

(1) Agricultural users

- The majority of agricultural lands within the proposed OID ESJS GSA boundary receive surface irrigation water supplemented by a limited amount of groundwater from OID. OID acknowledges however, that some landowners solely or conjunctively use their private groundwater wells, especially during periods of drought. Agricultural landowners are well represented by the OID Board of Directors, and as a GSA, OID will continue to work cooperatively with the landowners during GSP development and implementation.

(2) Domestic well owners

- OID anticipates that most domestic wells will remain exempt under SGMA, and will consider the effects of GSP development on those landowners.

Municipal well operators:

- While there are currently no municipal wells within the OID ESJS GSA boundary, OID will continue to remain available and open to future collaboration and communication from any new parties and interests that develop.

Public water systems:

- While there are currently no public water systems within the OID ESJS GSA boundary, OID will continue to remain available and open to future collaboration and communication from any new parties and interests that develop.

Local land use planning agencies:

- Land within the OID ESJS GSA overlies San Joaquin and Stanislaus Counties. OID has actively coordinated with both Stanislaus and San Joaquin Counties, and will continue to do so as the GSP is developed and implemented.

Environmental uses of groundwater:

- OID will work cooperatively with any agencies involved in environmental uses of groundwater within the OID ESJS GSA management area.

Surface water users, if there is a hydrologic connection between surface and groundwater bodies:

- OID recognizes the benefit of surface water irrigation and unlined canals in providing a source of groundwater recharge within the OID ESJS GSA boundary. OID is the only local agency with a surface water right in the GSA management area, but will continue work cooperatively with other surface water users in the basin during the GSP development.

The federal government, including, but not limited to, the military and managers of federal lands:

- OID has routinely coordinated with U.S. Fish and Wildlife and the local branch of the Army Corps, and will continue to do so with these and all federal government entities as a GSA.

California American Tribes:

- OID will coordinate with local tribes as necessary during GSP development and implementation.

Disadvantaged Communities, including, but not limited to, those served by private domestic wells or small community water systems:

- OID has identified the disadvantaged communities within the OID ESJS GSA boundary using the DWR DAC Mapping tool, and will incorporate input from those communities during GSP development.

Entities listed in Section 10927 that are monitoring and reporting groundwater elevations in all or a part of a groundwater basin managed by the GSA:

- OID will continue to coordinate with the monitoring entities to ensure groundwater elevation data within the OID ESJS GSA boundary is reported.
