

EXHIBIT “D”

LIST OF INTERESTED PARTIES (PURSUANT TO SECTION 10723.2)

California Water Code section 10723.8 requires that a Groundwater Sustainability Agency notification include a list of interested parties developed pursuant to Section 10723.2 and an explanation of how their interests will be considered in the development and operation of the groundwater sustainability agency and the development and implementation of the agency’s sustainability plan.

Section 10732.2 requires that the groundwater sustainability agency consider the interests of all beneficial uses and users of groundwater, as well as those responsible for implementing groundwater sustainability plans. A listing of these interests is provided below.

a) Holders of overlying groundwater rights, including:

- 1.) **Agricultural users** – The majority of the Agency’s area is composed of agricultural users. Agricultural users are represented on the McMullin Area Groundwater Sustainability Agency (MAGSA) Board of Directors through the member agencies. The MAGSA has developed and continues to improve blanket mailing lists which were used to notice several landowner outreach events. These lists as well as email lists will continue to be expanded and maintained leading into the development of a Groundwater Sustainability Plan (GSP) to insure overlying users stay informed and have a reasonable opportunity to participate in the process.
- 2.) **Domestic Well Users** – including rural residents within the GSA boundaries are reliant upon groundwater to meet their domestic needs. The MAGSA will reach out to rural residents through direct communications. The MAGSA will afford rural residents every opportunity to engage in groundwater planning and management efforts that may have an impact on their domestic wells.

b) Municipal well operators

There are no municipal well operators within the boundaries of the MAGSA.

c) Public water systems

The County of Fresno operates a public water system within the unincorporated community of Raisin City. The County is a participating member with representation on the Board of Directors of the MAGSA.

d) Local land use planning agencies

The County of Fresno is the overlying land use planning agency within the boundaries of the MAGSA. The County is a participating member with representation on the Board of Directors of the MAGSA.

e) Environmental Users of Groundwater

The State of California owns land within and adjacent to the GSA boundary. The lands are managed by the California Department of Fish and Wildlife ("CDFW"). The majority of lands are within the Delta-Mendota Sub-basin and outside of the Kings Sub-basin.

The MAGSA will consult with CDFW on any groundwater management efforts that may have an impact on their environmental uses.

f) Surface Water Uses

If there is a hydrologic connection between surface and groundwater bodies it is unknown at this time. During preparation of a GSP the MAGSA will consider and evaluate if such users do exist in the Kings Subbasin.

g) Federal Government

The MAGSA is not aware of any federal government lands within the GSA area. There are no military facilities in the vicinity of the GSA area. There may be Waters of the United States within or adjoining the GSA area.

h) California Native American Tribes

The MAGSA is unaware of any lands within its territory that fit this category. On March 1, 2017 a Sacred Lands File & Native American Contacts List Request was submitted to the Native American Heritage Commission. A response to the request has not been received. MAGSA will ensure there is a means for tribes to participate should the response received indicate that there is a need.

i) Disadvantaged Communities

The most recent Census tract data and Disadvantaged Community (DAC) pilot studies conducted by the Kings Basin Water Authority and County of Tulare indicate that the majority of service area meets the California Water Code definition of a DAC. The MAGSA will continue to work towards identifying and addressing the interests of private domestic well owners.

j) Entities listed in Water Code section 10927 that are monitoring and reporting groundwater elevations in all or a part of a groundwater basin to be managed by the MAGSA.

The Kings River Conservation District (“KRCD”) serves as the California Statewide Groundwater Elevation Monitoring (“CASGEM”) entity monitoring groundwater elevations in the Kings Sub-basin.

The County will continue to coordinate its groundwater monitoring activities with the KRCD and will support the KRCD in its role as the CASGEM entity monitoring groundwater elevations in the Kings Sub-basin.
