Re: Greater Kaweah GSA Monitoring Network - Groundwater Wells

As of the date of this memo, please note the following with respect to Greater Kaweah GSA's Groundwater Wells within its Monitoring Network Portal:

- There are 35 WL wells in the Portal associated to the Greater Kaweah GSA
- 34 wells were transferred from CASGEM
- One (1) well could not be transferred from CASGEM, likely because it was already transferred by an adjacent GSA in the Tulare Lake Subbasin (KSB-0818, 18S22E24D001M, 363572N1195468W001).
- In addition to the well above, there is one (1) well that is in the network (KSB-0742, 19S22E10R002M, 362864N1195654W002) that is also located across the border in the Tulare Basin and could not be reassigned.

We assume DWR finds it reasonable to allow coordinated monitoring of representative sites near boundaries and the system will be modified in the near future in order to accommodate GK GSA's desire to do so.

Eric C. Osterling,
