STATEMENTS OF WATER DIVERSION AND USE

On October 23, 1980 a copy of the Decree which resulted from the Scott River Adjudication was sent to all parties found to possess water rights.

Section 5101 of the State Water Code provides that each person diverting water, with certain exceptions, must file a statement of water diversion and use with the State Water Resources Control Board.

Included in the requirement for filing is the use of interconnected groundwater. Interconnected groundwater is defined as all groundwater so closely and freely connected with the surface flow of Scott River that any extraction of such groundwater causes a reduction in the surface flow of Scott River prior to the end of an irrigation season. This area is delineated on the State Water Resources Control Board maps included in the Scott River Decree and is defined as that area adjacent to Scott River in the reach from the confluence of Clarks Creek and Scott River to Meamber Bridge.

A copy of "Water Code Sections Relating to Statements of Water Diversions and Use", a letter to water users and statement forms are enclosed. If you need additional forms or further assistance, please let us know.

Sincerely,

A. P. Cummings
